

## Augmented Reality System Allows Experts to Share Knowledge Across the Enterprise

### How AUGMENTOR™ works

- Experts are guided through a simple method to author and share troubleshooting procedures.
- Task steps and decision points are sequenced and placed where they will be used.
- Instructions can include pictures, text, audio and 3D animations in each step.
- Procedures are saved to – and accessible from – the enterprise network.
- All employees, whether local or remote, can securely access stored procedures to build their skills and knowledge.
- Any employee, local or remote, can access the procedure to build their knowledge.
