

THE CHALLENGE

Technical training programs often **struggle to deliver consistent, engaging, and scalable learning experiences**—especially for new hires and less experienced workers. Often times, traditional training methods **fail to capture attention and don't accommodate various learning styles**. As a result, learners often **retain less information, require repeated instruction, and take longer to become job-ready**. Without interactive, self-guided tools that allow learners to practice independently and repeatedly, organizations risk **inconsistent outcomes and increased onboarding costs**.

By The Numbers

- **74% of workers are willing to learn** new skills or re-train in order to remain employable.⁽¹⁾
- **40% of employees with poor training** will leave the company within the first year.⁽²⁾
- **13% of employees workers are disengaged**, meaning they might leave a company the minute a better job becomes available.⁽³⁾

THE SOLUTION

LessonsXR addresses this gap by delivering interactive, self-guided training modules that can be accessed anytime, anywhere. Through 3D walkthroughs, quizzes, component discovery, and assembly/disassembly simulations, **LessonsXR empowers learners to build confidence and competence at their own pace.** Compatible with mobile devices, AR, and VR, it **ensures immersive, repeatable, and high-impact learning that scales with your workforce.**

THE IMPACT

60%
Faster
task completion

20%
Savings
on labor + parts costs

50%
Fewer
task reworks
